## SE BONDING SYSTEM

ProOptions SE Bonding System is a sixth generation direct bonding system that is a self-etching, light-cured & filled two-component adhesive for enamel and dentin.

### Applications:

- For use in all light-accessible bonding procedures
- For use in immediate dentin sealing prior to temporization

### Features

Two-part bond system

Cures with all lights

7.5% nano fillers

Consistently high bond strengths

### Benefits

- Eliminates separate etching step
- Simple and easy-to-use
- Versatility allows clinician to use curing light of choice
- Increased bond strength
- Seals tubules, which minimizes post-op sensitivity, microleakage and microbial invasion
- 66 MPa bond strength to Dentin
- 35 MPa bond strength to Enamel

### Kit Configuration:

(2) 5ml Bottles with (50) Applicator Brushes and (25) Application Wells

### Item Code:

9565 ProOptions SE Bonding System

### Complementary Products:

ProOptions Flowable Composite  
ProOptions Porcelain Etch & Silane
